GIT

Git is a **version control system** or tool used for **tracking changes in computer files**. It's tool developers install locally on their desktop or laptop. It is generally used for **source code management** in software development.

Individual Perspective

Teams Perspective

source : simplilearn

Why Should we use git

- tracking changes to source code
- multiple developers can work together
- tracks history
- creates backup

Github

GitHub is a **code hosting platform for version control** and collaboration. It lets you and others work together on projects from anywhere.

Git vs Github

Git is a **version control system** that lets you manage and keep track of your source code history.

GitHub is a **cloud-based hosting service** that lets you manage Git repositories.
